Allowable Subject Matter

Claim 2 is allowed.

The primary reason for the allowance of claim 2 is the inclusion of the limitation of a printhead including at least one signal line shared between a first printhead substrate and a second printhead substrate, wherein the shared signal line is used for time-divisionally inputting a selection signal for driving the plurality of printing elements and the control signal, the control signal includes at least a 2-bit signal, and one of the 2-bit signal is input as a dedicated control signal to the selection circuit exclusively from the second printhead substrate. It is this limitation found in the claims, as it is claimed in the combination, that has not been found, taught, or suggested by the prior art of record which makes these claims allowable over the prior art.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Imanaka et al. (US 6616257 B2) teach using selection data for selecting one of a plurality of preheating pulses. Tajima et al. (US 5867200) teach a selection circuit that selects a preheat pulse signal based on a 2-bit selection data.
